

1. Business Analytics

↳ the use of data, statistics, & technology to improve business decisions & performance. It helps solve problems and plan ahead.

E.g; SARS can analyse tax payer filing patterns to improve service delivery during tax season.

2. Data Analytics

↳ the process of inspecting & interpreting raw data to find trends, patterns and useful info.

E.g; SARS may analyse payment records to identify late payment trends across provinces.

3. Business Intelligence

↳ refer to tools and systems used to collect, organize and present data in dashboards or reports. It helps managers monitor performance.

E.g; Executives may use BI dashboards to track daily tax return submissions nationally.

4. Data driven decision making

↳ making decisions based on evidence from data instead of assumptions or guessing.

E.g; SARS may allocate more call centre staff during tax season, based on historical call data.

5. Big Data

- ↳ very large & complex data sets that are difficult to process using traditional method. It often involves high volume, speed & variety of data.

E.g; Millions of tax records, customs entries, and digital transactions create big data for SARS.

6. Descriptive Analytics

- ↳ explains what has already happened, using past data, reports and summaries.

E.g; A report showing how many returns were submitted last month in descriptive analytics.

7. Diagnostic Analytics.

- ↳ why something happened, by identifying causes and relationships in data

E.g; If refund delays increased, analysts may investigate staffing shortages or system downtime.

8. Predictive Analytics

- ↳ use historical data & models to forecast future behaviours.

E.g; SARS can predict peak filing dates and prepare for them.

9. Prescriptive Analytics .

↳ recommends actions that a business should take based on predictions of scenarios

E.g; A model may recommend extending online support hours during filing season .

10. Data literacy .

↳ the ability to read, understand, interpret and communicate data effectively.

E.g; Managers who understand dashboard trends , who can make quicker operational decisions .

Data , Measurement & Reporting →

11. Structured data

↳ is organized data stored in rows & columns , usually in databases or spreadsheets .

E.g; Taxpayer ID numbers, filing dates, and payment amounts are structured data

12. Unstructured data

↳ information that does not fit neatly into tables , such as emails, images, or voice recordings .

E.g; Recorded taxpayer calls and complaint emails are unstructured data .

13. Data Warehouse

↳ a central storage system that combines data from different sources for reporting and analysis

E.g.; SARS may store tax, customs & payment data in one warehouse for analysis.

14. Data Mining.

↳ the process of finding hidden patterns or relationships in large data sets.

E.g.; Analysts may detect suspicious filing behaviour linked to fraud risks.

15. Data Visualisation.

↳ means presenting data through charts, graphs or maps to make information easier to understand.

E.g.; A heat map can show provinces, with the highest compliance rates.

16. Dashboard

↳ a visual display showing important metrics in one place, often updated in real time.

E.g.; A dashboard may display daily returns received, refunds processed, call waiting times, average filing time etc.

17. Metric

↳ any measurable value used to track activity or performance

e.g; Number of calls answered per day.

18. Key Performance Indicator (KPI)

↳ a critical metric directly linked to strategic goals. All KPIs are metrics, but not all metrics are KPIs

E.g. Refund turnaround time may be a KPI because it affects tax payer satisfaction.

19. Benchmark

↳ a standard used to compare current performance against targets or industry averages.

E.g. SARS may compare current service turnaround times to last year's results.

20. Segmentation.

↳ dividing people into groups based on shared characteristics.

E.g Tax payers may be segmented into individuals, SMEs, and large corporates.

Customer & Sales KPIs →

21. Conversion Rate

↳ percentage of users who complete a desired action.

E.g.; Percentage of website visitors who successfully register for eFiling.

22. Customer Acquisition Cost (CAC)

↳ total cost of gaining one new customer

E.g.; Cost of campaigns that encourage new taxpayers to register digitally.

23. Customer Lifetime Value (CLV)

↳ estimates the long term value a customer provides over time.

E.g. Long-term revenue contribution from a compliant tax payer over many years.

24. Churn Rate.

↳ a percentage rate of customers who stop using a service.

E.g. Users who stop using eFiling and return to branch visits.

25. Customer Retention Rate.

↳ measures how many customers continue using a service.

E.g; Percentage of tax payers who continue using eFiling annually.

26. Net promoter Score (NPS)

↳ willingness of customers to recommend a service to others.

E.g; Surveying users after branch service or online support.

27. Average Order Value (AOV)

↳ average amount spent per transaction

E.g; Average payment value through SARS online payment channels.

28. Sales Funnel.

↳ Shows stages from awareness to final action or purchase

E.g; Awareness campaign → Website visit → eFiling registration
Active User ↩

Marketing & Campaign Analytics →

29. Marketing Campaign

↳ planned set of activities to promote a product, service or behaviour.

E.g. Tax season awareness campaign encouraging early filing.

30. Post-campaign analysis

↳ reviewing the performance of a campaign after it ends.

E.g. Measuring whether tax season adverts increased online submissions.

31. Incremental Revenue

↳ extra income generated because of a campaign or action.

E.g. Additional tax collected after a compliance reminder campaign.

32. Return on Investment (ROI)

↳ measures profit gained, compared to money spent.

E.g. If SARS spend R1 million on a campaign & collections rise significantly, ROI will be positive.

33. Return on Ad Spend (ROAS)

↳ measures revenue earned for every rand spent on advertising.

Eg. R5 collected for every R1 spent promoting compliance reminders.

34. Click Through Rate (CTR)

↳ percentage of people who click on adverts or links after seeing it.

Eg; Users clicking a SARS filing season email link.

35. Bounce Rate

↳ percentage of visitors who leave a website without interacting further.

E.g; Users leaving the SARS website after only viewing the homepage

36. A/B Testing

↳ compares two versions of content to see which performs better

E.g; Testing 2 SMS reminder messages to see which gets more responses.

37. Lead Generation.

↳ attracting and capturing potential future customers or users.

Eg; Collecting details of businesses interested in customs registration

38. Marketing Attribution

↳ Identifies which channel contributed most to a result.

Eg; determining whether email, radio, social media drove more e-filing registrations.
